SUMMARY

AI Engineer with 1+ year of experience developing and deploying machine learning models for computer vision and intelligent systems. Proven expertise in optimizing neural networks for scalability and integrating AI features into production environments.

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript
Deep Learning: PyTorch, TensorFlow/Keras, scikit-learn, XGBoost
Neural Networks: CNNs, Transfer Learning, Ensemble Models, Model Optimization
Computer Vision: OpenCV, Object Detection, Image Classification, Video Analytics
Deployment & APIs: FastAPI, Flask, REST APIs, Docker, Model Integration
Tools: Git, NumPy, Pandas, Matplotlib, Jupyter

EDUCATION

National University of Modern Languages (NUML) Islamabad, Pakistan
Bachelor of Science in Artificial Intelligence Feb 2022 – Jan 2026

EXPERIENCE

AI Engineer (Intern) Mar 2025 – Present
Neuronix Technology Islamabad, Pakistan

- Developing real-time computer vision systems for workplace safety monitoring and compliance tracking
- Building object detection models optimized for low-latency inference and edge deployment
- Implementing video analytics pipelines for automated monitoring and alert generation

LLM Integration Engineer (Contract) Oct 2025 – Dec 2025
Dassoft (Siberkoza, NASTP) Rawalpindi, Pakistan

- Optimized AI models for production environments, improving accuracy by 25% and reducing latency by 30%
- Developed REST APIs for scalable model deployment and integration with backend systems
- Built testing pipelines ensuring model robustness and reliability in production

AI/ML Intern Jul 2025 – Aug 2025
Siberkoza (Startup, NASTP) Rawalpindi, Pakistan

- Developed and deployed ML models for automated log classification processing 100K+ entries daily
- Implemented model monitoring pipelines tracking performance metrics and drift detection
- Optimized feature engineering and model training workflows for production scalability

PROJECTS

Smart Extract – Intelligent Surveillance System (Final Year Project) 2024-2025

- Developed deep learning system to detect and extract fire/accident clips from video streams, reducing manual surveillance review time by 85%
- Implemented temporal voting mechanism reducing false positives by 40% and built severity prediction module for priority-based incident response

Real-Time PPE Detection & Workplace Monitoring 2025

- Built computer vision system for PPE compliance, employee activity monitoring, and people/inventory counting in office environments
- Optimized models for low-latency edge deployment achieving 30+ FPS, reducing workplace incidents through improved compliance tracking

COVID-19 MRI Image Classification 2024

- Developed medical imaging model to detect COVID-19 from MRI scans achieving 84% accuracy with inference under 2 seconds
- Deployed production-ready FastAPI backend with REST endpoints for real-time predictions and confidence scoring

CERTIFICATIONS

Machine Learning Specialization – Coursera (2024)
Generative AI with RAG & LangChain – Coursera (2024)
